readme.md 2021/12/18

## 0.1(進行中)

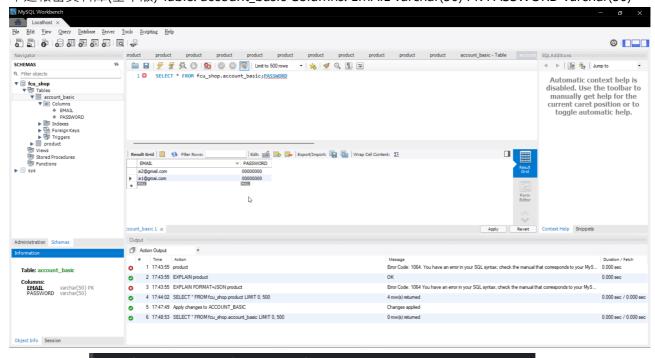

前端

• 登入介面

後端

## 登入

• 串建帳密資料庫(基本版) Table: account\_basic Columns: EMAIL varchar(50) PK PASSWORD varchar(50)

```
[TimeHooker] loading outer window...
ready!
Time Hooker Works!
The request is complete!

> makeRequest("./getAccounts")

⟨ undefined

▼(3) [{...}, {...}] []

▶ 0: {email: 'al@gmai.com', password: '000000000'}

▶ 1: {email: 'a2@gmail.com', password: '000000000'}

▶ 2: {email: 'b1@gmail.com', password: '000000000'}

length: 3

▶ [[Prototype]]: Array(0)

◆ 帳密API□傳
```

前端輸入

\*\*makeRequest("./getAccounts")\*\*取得所有帳密

• 帳密新增 資安問題 /signUp/b1@gmail.com/00000000

待添加

readme.md 2021/12/18

```
@GetHapping("/getAccounts")

public List<Account> getAccounts() {
    System.out.println("取得所有概念");
    return accountManager.getAccounts();

    //注册係密
    @GetMapping("/signUp/{email}/{password}")
    //前端回傳的方法以後要改 會被電
    public boolean addProducts(@PathVariable("email") String email, @PathVariable("password") String password) {
        //try...ca... 待加

        //第二次檢查註冊系密 檢查註冊_function(){}
        accountManager.addAccount(email, password);

    return true;

    }

    //第二次检查註冊_function(){
    // return turn
    // }
    // 多入條密_function(@PathVariable("email") String email, @PathVariable("password") String password){
    //
    // return turn
    // }
    // 多入條密_function(@PathVariable("email") String email, @PathVariable("password") String password){
    //
    //
    // }
}
```
